Purpose	Establishing new / Expansion / Diversification / Modernization of Industrial Units in Karnataka

*This document is the authoritative SRS for AI-assisted FormBuilder JSON generation.
Follow this exact format when onboarding new department services.*

HOW TO USE THIS SRS DOCUMENT

This SRS (Service Requirement Specification) document is the single source of truth for configuring any government service form in the Karnataka Single Window FormBuilder system. When uploaded to the AI FormBuilder, it auto-generates a complete database-ready JSON.

1. Purpose of This Document

- Define every field, type, validation, and conditional rule for the CAF form
- Serve as input to AI FormBuilder to generate DB-ready JSON (no manual SQL needed)
- Act as a template for onboarding new department services
- Provide a techno-functional reference for developers, BAs, and department officials

2. How AI FormBuilder Uses This SRS

Step 1: Upload this .txt file to the AI FormBuilder system

Step 2: AI reads every PAGE, SECTION, FIELD, and CONDITIONAL RULE

Step 3: AI generates a single structured JSON matching the DB schema

Step 4: Admin reviews JSON in preview screen

Step 5: On approval, JSON is inserted into 10 m_fb_* database tables

Step 6: Form is live for investors on the Single Window Portal

3. Field Type Reference

Field Type	Description	Examples in CAF
TEXT	Single-line text input	Name, Address, PAN, CIN
NUMBER	Numeric input (integer or decimal)	Investment, Area, Employment
SELECT	Single-select dropdown	District, Type Of Proposal
MULTISELECT	Multi-value dropdown	Assistance Type
RADIO	Radio button (2-4 options)	Yes/No, New/Existing
CHECKBOX	Single checkbox (true/false)	Same Address flag
DATE	Date picker (calendar)	Date Of Incorporation
TEL	Phone/mobile number input	Mobile Number
EMAIL	Email address input	Corporate Email
TEXTAREA	Multi-line text area	Products Description
FILE	File upload (DMS integrated)	PAN Card, DPR, Land Deed
HIDDEN	Hidden system field (not shown to user)	Internal tracking IDs

4. Mandatory Field Values

[Yes] Always required. Form cannot be submitted without this field.

[No] Optional. User may leave blank.

[Conditional] Required only when specific condition is met (see CONDITIONAL RULES).

[Auto Populated] Pre-filled from investor registration. Usually read-only.

[Auto Calculated] System calculates value (e.g. totals). Always read-only.

5. Source Types for Dropdown/Select Fields

STATIC: Options listed inline in this SRS. Fixed values (e.g. Yes/No, Zone 1-5).

MASTER: Options come from a DB master table (e.g. Country, District, NIC Code).

Master table ID is configured in FormBuilder admin.

6. How to Write SRS for a New Service

1. Copy this document as a template
2. Replace FORM METADATA (Form Name, Department ID, Service ID, Form Type ID)
3. Define each PAGE with sections and fields in the same format
4. For each field: Name | Type | Mandatory | Grid | Options/Source | Conditions | Validation | Help Text
5. State CONDITIONAL RULES at the end of each section
6. For repeatable rows: mark section as ADD MORE GROUP with min/max rows
7. Upload the .txt version to AI FormBuilder to generate JSON automatically

Key Rules to Remember

- Grid 6 = half width (two fields per row). Grid 12 = full width (one field per row).
- For address fields, always use Grid: 12.
- For repeatable sections (e.g. list of directors), mark as ADD MORE GROUP with min/max rows.
- Master dropdowns: write Source: MASTER (<table name>). Do not list options.
- Static dropdowns: list all options with label and value pairs.
- Values must be lowercase snake_case (e.g. 'new_project', 'public_limited').
- Conditional rules: always list at the END of the section (not inline).
- Validation Rule must be a JSON object: {"min": 0} or {"accept": ".pdf", "maxSizeMB": 5}

- Auto Populated fields: set Is Readonly: Yes. Auto Calculated: always readonly.
- File upload fields: always set Validation Rule with accept and maxSizeMB.
